December 1990

Introduction

This report is a collection of the most commonly requested economic and demographic information about Utah. The Utah Office of Planning and Budget has updated this report four times, each time trying to add an additional year of data and correct for revisions and mistakes. Data are presented by county, multi-county district (MCD), and state. The purpose of this report is to provide the public and private sector with a time series of economic and demographic data to use in making wise decisions.

The data for these profiles come from many sources. The population data come from the Utah Population Estimates Committee. Employment and recent personal income data are from the Utah Department of Employment Security. The primary source for personal income data, however, is the U.S. Bureau of Economic Analysis. Both assessed valuations and gross taxable sales are from the Utah State Tax Commission and birth and death data come from the Utah Department of Health.

The Utah Office of Planning and Budget has attempted to incorporate all revisions of historical data and correct all known data problems in this report. As with any statistical compendium, however, there is always the potential for error. The Utah Office of Planning and Budget welcomes comments and corrections.

These profiles are also available in a machine readable format. Any questions or comments about this report should be directed to the Demographic and Economic Analysis section, Utah Office of Planning and Budget, (801) 538-1036.
